Birble Win

Introduction:

Birble will revolutionize the utility based NFT by providing token support on multiple blockchains and every person in our ecosystem will have the opportunity to profit from our platform as well as the investments made by a TRUE community DAO. Birble means to provide a safe and secure platform for the average person to invest in new crypto projects and applications by allowing the community DAO members to pick the projects Birble invests time and resources in. Birble will consistently reward account holders through our Stake-To-Win mechanism regardless of the health status of any Birble related investments through our rewards pool. Obviously the better Birble investments do, the more rewarded Birble account holders will be compensated. Investments in partner projects can NOT be guaranteed, therefore it is vitally important for users to benefit from our Stake-To-Win mechanism, while waiting to see the outcome of any Birble related investment. Because of the instability that can arise in investing in new crypto startups Birble will be instituting a DAO community regulated

vote immediately in order to oversee the investment and expansion to other projects and blockchains to ensure proper unbiased oversight from the community. Until the DAO takes control any investment funds received back to Birble will be re-invested in the investment club project development pool. Each time Birble expands to a new blockchain, new smart contracts, tokens and NFTs will be created to facilitate that particular chain with a max of 500m tokens and 50k NFTs across all 5 blockchains planned out for the next 2 years. Subsequently the deflationary mechanism will reduce the total supply by 24% on each corresponding blockchain over the next 2 years to coincide with development and to help stabilize the price of the Birble token.

What is Birble?

Birble – The first Multi-chain Stake-To-Win platform with an investment club for higher tier holders *(2 Birble NFTs & a minimum of 20,000 Birble tokens staked at all times for investment club membership)*. The first Stake-To-win blockchain platform will launch on Binance Smart Chain (BSC) in 4th quarter 2022. We are providing the newest and safest way to invest in new crypto projects and be rewarded for doing so regardless of the success of the project's development. Birble is the 1st investment platform that allows individuals to invest in upcoming crypto projects across multiple blockchains with little to NO risk, only rewards! Birble will use its ecosystem funds controlled and voted by the community DAO in order to oversee & invest in new crypto startups on each blockchain we launch our protocol on. All rewards from investment partners will be returned to the Birble Investment Club minus overhead and expenses to be distributed fairly amongst the community members (*1st year all investment funds will be reinvested in development pool unless otherwise*

vote by DAO).

Because Birble is a "Deflationary" token that institutes a "Burn" function along with a 5% tax to promote the HODL mentality as well as providing funding to the ecosystem, Birble will have constant pressure helping stabilize the longevity of the price.

How Stake-To-Win Works

All you need to take part in Stake-To-Win – just hold more than 1000 **$BRBL** tokens in your wallet and a Birble NFT in order to validate your account for that corresponding blockchain during the weekly snap-shot.

Every 7 days the system takes a snapshot of all **$BRBL** balances at a random time to produce the rewards list.

Everyone who meets the outlined Tiered criteria (see website for full details) will get to divide the "Stable Token Reward Fund", A 1000 participants every 7 days will be randomly selected as winners! 80% of the reward fund, whatever amount it is will be evenly distributed among the 1,000 selected participants with 20% going back in development for the protocol.

Birble NFTs' are you access pass to our entire ecosystem and are minted for FREE (applicable gas fees apply). You must own the Birble (BRBL) Token in order to mint the Birble NFT on any blockchain that contains our protocol. Every wallet containing at least 1,000 Birble tokens will be able to mint 1 free NFT and those with 20,000 or more will be able to mint a second FREE NFT to be part of the investment club. We will launch the NFT collection just prior to the Stake to win platform going live. We are aware that not everyone who owns Birble tokens will mint an NFT while others will be able to mint 2 Birble NFTs, this only strengthens the reward mechanism for those participating in the Stake-To-Win platform.

The 1st platform to launch will be on Binance Smart Chain (BSC) in the 4th quarter of 2022 and start testing and launching on other EVM compatible blockchains shortly thereafter.

We will launch phase 2 on Cardano in 2nd Quarter 2023. Therefore, we will start the fund-raising effort for Cardano in 4th quarter 2022 to have the greatest probability of ensuring we have the community support along with qualified developers to build a Haskell version of our contracts ready for deployment on Cardano in 2023.

The token sale for Binance Smart Chain (BSC) is scheduled for late October 2022.

Our first series of NFTs on BSC will mint in December 2022 for FREE to grant access to the platform. The Birble NFT is your access pass to the entire ecosystem, whether it be the Stake-To-Win platform or the Birble Investment Club. Stake-To-Win platform requires that the wallet holder has at least 1,000 Birble tokens and 1 Birble NFT present in their wallet, whereas the Birble Investment Club requires that the wallet contain at 20,000 Birble tokens and 2 Birble NFTs.

Burning Mechanism

Every 3,500,000 blocks in Binance Smart Chain 1% will be burned from the Ecosystem wallet. This action will lead to a decrease in the total number of **$BRBL** tokens by 24% in 2 years after the start of the project. As a result, the total number of tokens in the market will be reduced greatly. We will replicate this feature across all blockchains that we launch our protocol on. All actions from the burning mechanism will be recorded in the archives as well as the monthly audit reports. To learn more about Burn click here.

Birble Powered Aggregator

Birble has created our own proprietary algorithm that we call the BPA. **Birble Powered Aggregator** counts the eligible **$BRBL** balances and trading volume from each wallet address. This includes the amount of tokens you hold in your wallet, the amount of **$BRBL** you've sent in LP and any transactions of **$BRBL**. This aggregator works in conjunction with the Stake-To-Win protocol in order to reward token holders weekly.

There are also **$BRBL Power+** levels, designed to incentivize holding and trading more **$BRBL** tokens. We've broken those down into Tiers. The value of every individual ticket (worth 1000 **$BRBL**) increases as you level up. See Birble.win for details on current tiers. These tiers can be increased or decreased by community DAO vote in order to preserve the intrinsic value of the platform.

Birble Community DAO

The community DAO is scheduled for release in 4th quarter 2022 with full controlled to assume by community in 1st quarter 2023. All Birble NFT holders will be considered DAO members and will be entitled to (1) vote per wallet containing an NFT. Each vote will cost (1) Birble token in order to process the transaction (your vote) along with applicable gas fees on the particular chain. The Birble tokens that are collected during each community vote will be allocated to the ecosystem and development fund in a 50/50 split. It will take 51% of the total votes either positive or negative in order to determine a vote. Example if 51% of the total votes are in the "affirmative" then the vote passes, whereas 51% of the vote that is "negative" will result in the vote failing to pass.

Birble Investment Club

Making it easy to invest in new crypto projects all controlled and monitored by community DAO. The community will review and vote on

all potential Birble investments to ensure that no bias's corrupt the investment process.

In order to be part of the Birble Investment Club, you must have 2 Birble NFTs and at least 20,000 Birble tokens at all times to access the Birble investment rewards. All NFTs are free to mint (excluding applicable gas fees) but only those who have 20,000 or more Birble Tokens in their wallet will be able to mint a 2nd FREE NFT

Why invest with Birble?

1) How to invest with Birble.
All you must do is hold 2 Birble NFTs and at least 20,000 Birble tokens to validate your Birble Investment Club account, also your Birble tokens you will still allow you to take part in the Stake-To-Win protocol. The blockchain you have your tokens and NFT on will have a smart contract enabled that will do the rest! Through the Birble Aggregator 1k participants will be rewarded every week, the amount of rewards will be based on the amount of Birble token holdings in that particular wallet at the time of the periodic snap-shot.

2) What Birble invests in? |
Birble will use the "Development Fund" from each blockchain in order to support and launch partner projects on that corresponding blockchain. In some cases, Birble will take portion of the "Newly Supported Projects" token or NFT in order to air-drop to existing Birble NFT holders, along with additional perks that may arise from the investor relationship (this will all be controlled and determined by community DAO). Birble will essentially build our own applications and partner with new & existing crypto projects in order to maximize the return potential for Birble NFT account holders.

3) How Birble shares with investors.
Birble will reward account holders in many ways:
A) Stake-To-Win reward protocol (weekly rewards).

B) Air-drops of Birble tokens, new partner tokens and NFTs
C) Locked liquidity on various trusted DEXs like PancakeSwap.
D) Any profits derived from partner projects will be distributed through the DAO to Birble Investment Club accounts.
E) Monthly audits to ensure accountability and transparency.

Birble NFTs

The Birble NFT grants you access to the entire ecosystem and allows you to take part in any of our Stake-To-Win mechanisms along with any investment products & rewards that are introduced into the protocol.

The Birble NFT will be available on all five blockchains in time and is your exclusive access pass to that particular chains ecosystem and all that it provides through the Birble platform. All though it will be free to mint the Birble NFTs (excluding applicable gas fees) you will be required to hold the Birble token to mint the NFT on that corresponding chain. Each chain will have its own Birble token and NFT along with accompanying smart contracts.

1st 10k NFT access pass collection launched on BSC

We will launch our first set of NFTs consisting of 10,000 on Binance Smart Chain (BSC) and will be totally free (minus gas fees) for all holders of the Birble Token. Each wallet will be able to mint 1 NFT assuming they have at least 1,000 Birble tokens present in that wallet, as each wallet acts as its' own Birble account. Wallet holders that have 20,000 Birble tokens or more will be eligible to mint a second free NFT granting them access to the Birble Investment Club, this will be a first come first serve basis. Your NFT automatically entitles you to DAO rights and allows you to use your Birble tokens in the Stake-To-Win reward mechanism.

The NFT is required in order to be part of the Birble platform / Investment club and to access ANY of the reward features like Stake-

To-Win and upcoming investments through the Birble Investment Club. You also must hold a Birble NFT in order to participate in the DOA and all associated voting functions of the ecosystem. If you sell or trade your NFT you will lose access to the Birble platform, although you can still trade your Birble tokens on the open market.

Subject to change depending on the artist

Birble Token

Birble tokens will be minted on every blockchain that we launch our platform on starting with Binance Smart Chain (BSC) and moving on to others such as: Ethereum, Polygon, Harmony, and Cardano. We will mint 100 million tokens per chain for a max supply of 500 million and through our deflationary mechanism that supply will ultimately be reduced by 24% in the first two years, therefore further increasing the value of the Birble token and Birble NFT.

Multi-Chain

Birbles main goal is to expand to all blockchains with our Stake-To-Win application in order to build a community for upcoming crypto projects in order to reward the original holders with minimal to no risk. Blockchains we will be expanding to in the immediate future: *Binance Smart Chain, Ethereum, Polygon, Cardano, Harmony.*

Tokenomics

On Each Blockchain
Birble will create a deflationary token to work with the smart contracts deployed to that particular chain.
100 Million Birble Tokens created
Token Sale 20%
Liquidity Fund 20%
Marketing Fund 8%
Team & Advisors 8%
Ecosystem Fund 24%

Development Fund 20%

Ecosystem

24%

Development Fund

20%

The Funds Raised In Token Sale

Hard Cap Reached

20% 20 million Birble tokens sold at .01 usd / 200k USD Raised
25% Ecosystem Fund
25% Development Fund
5% Marketing
5% DAO Reserves
20% Liquidity
*20% Project Development

Soft Cap Reached

5% 5 million Birble tokens sold at .01 usd / $50,000.00 USD Raised
25% Ecosystem Fund
25% Development Fund
5% Marketing

5% DAO Reserves
20% Liquidity
*20% Project Development

Any tokens NOT sold during token sale from the 20 million allocated will be returned to the Birble DAO and distributed among community members and development fund.

We plan to replicate this process across all five chains in the next two years in order to fund the Birble ecosystem and DAO expansion. Through our partner bridge the Birble token will be interchangeable with each Birble token from the other various chains, therefore allowing users to seamless flow from one blockchain to the next according to the rate of tokens allocated through the DAO Reserves. The community DAO will also be responsible for the periodic "Buy Back" of the birble token that will also further reduce the supply along with the built-in deflationary model.

We have implemented a 5% transaction fee on the Birble token in order to help fund the ecosystem and benefit the token holders. This is very similar to the original "Safemoon Token" just with a much lower tax and better plan for stabilization and burn rate.
Below you will find a diagram on how the transaction fee (Tax) is allocated throughout the ecosystem.

TAX DISTRIBUTION	$BRBL INVESTMENT CLUB	WEEKLY REWARD FUND	MARKETING FUND
Every transaction generates fees in Birble tokens back to the ecosystem and this benefits everyone!	2% of every transaction is collected into an investment fund that is controlled by the Birble DAO to invest in new projects.	Every 7 days, the system randomly selects 1000 winners who will share 80% of the fund among themselves, 20% goes to DEV Fund	A great project requires great marketing. With the help of the community, we drive intense brand awareness & growth.
5%	2%	2%	1%

Developmental Time Line

November 2021

-Birble Formed

 -Initial concept of reward-based investing

January 2022

-Begin testing in sandbox environment

March 2022

-War here in Ukraine greatly hindered our work

 -Investors withdraw due to economy uncertainty

July 2022

-Resume testing of smart contracts

 -Development of Birble aggregator

August 2022

-New team members added

 -Continue testing in sandbox

September 2022

-Move testing to BSC Test-net

October 2022

-Move to BSC Main-net

-Token sale

November 2022

-Development of partner monetized social media platform

-Registration on Birble website for DAO members

-Stake-To-Win launches

December 2022

-NFT mint on BSC

-DAO introduction

January 2023

-Testing of Birble Bridge

-Testing of NFT marketplace on BSC

Conclusion

The Birbles' strategy is simple, launch a Stake-To-Win DAPP across multiple blockchains in order to better guarantee investor returns and use development funds controlled by community DAO to invest in new projects so that it may increase the investor returns and strength the Birble ecosystem as a whole.

- Birble will set up a grant process to attract new projects & potential partners.
- The Birble community DAO will oversee all development & investments through community vote.
- All successful investments through Birble partners & projects will be even distributed among the DAO (minus expenses & overhead)
- Birble will run monthly audits for community review.
- Birble is completely open-source to encourage others to build with us and secure investor confidence.

The Birble DAO will always have the option of bringing in paid investment advisors who specialize in cryptographic technology to help consult for the fiduciary responsibility of the community. This action must be voted on through the community DAO by the NFT account holders on that particular blockchain. Birble will always have the community at the center of every action that it takes, and we feel that involvement from the DAO is vital and should be preserved at all costs!
